

Stephen Omotoso

Backend Engineer • 5 Years • Node.js • Java • Python • MongoDB • SUI Blockchain • AWS

Yaba, Lagos, Nigeria | +234 916 108 4583 | stephenomotos@gmail.com | github.com/Bamzy123 | linkedin.com/in/omotoso-stephen-298010273

PROFESSIONAL SUMMARY

Backend Engineer with 5 years of experience designing and shipping scalable, secure, and production-grade backend systems across EdTech, creator economy, logistics, and Web3 environments. Proficient in Node.js (Express.js), Java (Spring Boot), and Python (Django), with hands-on experience in RESTful API design, MongoDB database architecture, JWT authentication, microservices, cloud deployment on AWS, and SUI blockchain integration. Has contributed to backend and API integration work behind two live mobile applications published on the Google Play Store. Comfortable leading end-to-end backend delivery and collaborating cross-functionally with product and design teams. Passionate about writing clean, maintainable code that holds up in production.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, Java, Python
Backend	Node.js (Express.js), Spring Boot, Django, REST APIs, Microservices Architecture
Mobile	React Native — backend & API integration for production mobile applications
Blockchain	SUI Blockchain Integration, Web3 Concepts, On-chain Transaction Handling
Databases	MongoDB, PostgreSQL, MySQL — schema design, indexing & query optimisation
Cloud & DevOps	AWS (EC2, S3, Lambda, RDS), Docker, CI/CD, Netlify, Vercel
Security	JWT, OAuth2, Role-Based Access Control (RBAC), HTTPS/TLS, Input Validation
Tools	Git, GitHub, Postman, VS Code, IntelliJ IDEA
Frontend (supporting)	React.js, Next.js, HTML5, CSS3

PROFESSIONAL EXPERIENCE

Backend Engineer (Freelance) — Self-Employed

2021 – Present

Independently architected and delivered backend systems, APIs, mobile app integrations, and Web3 integrations for personal and client projects across multiple domains.

- Designed and built RESTful APIs using Node.js (Express.js), implementing authentication (JWT), route protection, middleware architecture, and error handling for production deployments.
- Built and integrated backend services powering two live mobile applications on the Google Play Store — PushnDeliver and Skipka Rider — handling order processing, real-time tracking data, and user/rider management.
- Integrated SUI blockchain technology into a fullstack platform, handling on-chain interactions, wallet logic, and transaction flows for real users.
- Architected and managed MongoDB databases — designed schemas, defined relationships, implemented indexing strategies, and optimised queries for performance.
- Deployed and managed backend services on cloud infrastructure (AWS, Netlify), ensuring uptime, scalability, and security in production environments.
- Implemented microservices patterns and modular backend architecture, enabling maintainable and independently deployable service components.
- Managed end-to-end project delivery across EdTech, logistics, and creator economy domains — from system design and development to deployment and post-launch maintenance.

Software Engineer Tutor — NextGen Africa

Jan 2026 – Apr 2026

NextGen Africa is a technical institution offering training in software engineering, AI automation, cybersecurity, product design, and digital business.

- Designed and delivered a structured three-month backend and fullstack development curriculum, taking students from fundamentals to shipping deployable projects.
- Provided technical leadership through code reviews, architecture guidance, and one-on-one debugging sessions with student teams.
- Mentored aspiring engineers on API design, database management, authentication systems, and deployment best practices.

SELECTED PROJECTS

PushnDeliver — On-Demand Goods Delivery App • [Live on Google Play Store](#)

A mobile delivery application connecting customers with delivery riders for fast, reliable goods delivery. Contributed to backend and API integration work, supporting order placement, real-time order status updates, rider assignment logic, and data flow between the mobile app and backend services.

<https://play.google.com/store/apps/details?id=com.pushndeliver.pndrider>

Skipa Rider — Ride-Hailing Mobile App • [Live on Google Play Store](#)

A ride-hailing application similar to Uber, connecting riders with drivers in real time. Contributed to backend and API integration supporting ride booking, live trip data, driver-rider matching, and trip history management within the application.

<https://play.google.com/store/apps/details?id=com.linq.skipparider>

Faveclub — Artist-Fan Royalty Platform • Backend Developer + SUI Blockchain Integration

Built the complete backend of a Web3 creator economy platform enabling artists to share royalties directly with fans on-chain. Architected the server using Node.js (Express.js), designed and managed a MongoDB database for user and transaction data, implemented JWT-based authentication and role management, and integrated SUI blockchain for on-chain royalty distribution and wallet interactions. Deployed to production on Netlify with a focus on security, reliability, and performance.

<https://faveclub.netlify.app>

NextGen Africa Website — Institutional Platform • Backend Contributor

Contributed backend integrations and API connections to the NextGen Africa web platform — a technical learning institution offering programmes in software engineering, AI, cybersecurity, and product design.
